GOOGLEDRIVEPLATFORM

Google Cloud Platform (GCP) is a portfolio of cloud-based services built on the most comprehensive infrastructure in the world. With the versatility and scalability of the Google Cloud, your business can create anything from a simple website to the most complex applications.

CHOICE
Communications Corporation

Build at Google Scale

Google Cloud Platform enables developers to build, test and deploy applications on Google's highly-scalable and reliable infrastructure.

SCALE TO MILLIONS OF USERS WITH UNPARALLELED PERFORMANCE

Google's infrastructure is built upon the same platform that allows the return of billions of search results in milliseconds, delivery of 6 billion hours of YouTube video per month and storage for 425 million Gmail users.

FEATURES

Global Network: Google has one of the largest and most advanced computer networks to deliver fast, consistent and scalable performance

Redundancy: Data is automatically mirrored across storage devices in multiple locations around the globe

Scalability: Applications hosted on Cloud Platform can automatically scale up to handle demanding workloads and scale down when traffic subsides, pay only for what you use

Integration: Build the way you want. Google integrates with familiar development tools to make it easy to build within Google Cloud Platform

BENEFITS

Innovation: Google's constant innovations in software infrastructure allow you to Access Google's technology innovations faster

Versatility: Mix and match to meet your business needs. Flexible virtual machines and a fully managed platform allow for greater computing, services and storage options

Functionality: Use Google APIs and services to quickly enable a wide range of functionality for your application. You don't need to build these from scratch, just take advantage of easy integration within Cloud Platform
