

CloudSecurity

Protecting Your Business with a Full Security as a Service Portfolio

RapidScale, a Cox Business Company, provides a full CloudSecurity portfolio with industry-leading network and host-based tools for major compliances such as PCI and HIPAA. Our portfolio includes Unified Security Management, Web Security and Application Delivery, Email Security, Gateway Security Services and more. Address business vulnerabilities and fill in any gaps with our full security portfolio at your fingertips.

Unified Security Management

The USM platform accelerates and simplifies threat detection, incident response and compliance management for IT teams with limited resources.

Web Security and Application Delivery

The inclusive, fully integrated solution includes Web Application Firewall, DDoS mitigation, Content Acceleration and Global Load Balancing.

Email Security and Archiving

Security, archiving and continuity services protect business email and deliver comprehensive email risk management in one fully-integrated service.

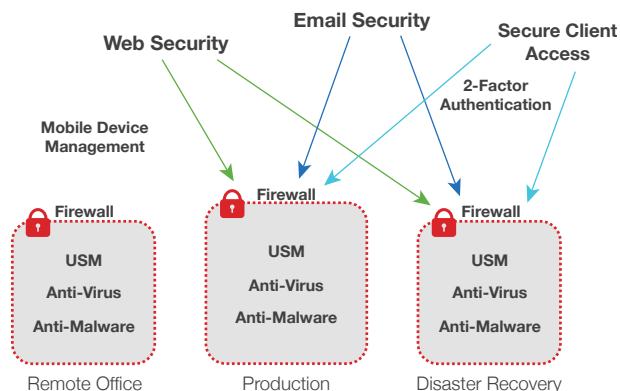

Gateway Security Services

Take advantage of fully managed next-generation firewall services that integrate with the USM platform for added efficiency and intelligence.

Features

- Fully managed by RapidScale Security Operations
- Automatically updated threat signatures
- Compliance reporting
- Network-based stateful inspection firewall
- Web-based administration

Unified Security Management with AlienVault

With essential security controls and integrated threat intelligence built in, CloudSecurity USM puts complete security visibility of threats affecting your network and how to mitigate them within fast and easy reach. Coupled with RapidScale's Security Operations Center, your business can rest easy knowing the best-of-breed technology and security experts are working for your protection.

Web Application Firewall with Incapsula

Whether you're running a small e-commerce business or in charge of IT operations for an enterprise, RapidScale's Web Security and Application Delivery tools will greatly improve your website security and performance. Delivered as a cloud service, Incapsula reduces the hardware and application management burden, giving you powerful tools that go beyond the capabilities of an on-premises solution.

Email Security and Archiving with Mimecast

We provide cloud-based email management for Microsoft Exchange and Office 365, including security, archiving and continuity services to protect business email. Defend against advanced threats with spam and virus protection, targeted threat protection, and content control and data leak prevention. Our CloudSecurity offering ensures email availability no matter what, providing your team with continued access to their everyday tools without disruption.
